

**Features**

Type U is a robust element consisting of 2 solid U-shaped steel parts securely bonded to the rubber section. To achieve higher flexibility, two holes in the rubber are provided between the metals. The upper metal plate is fixed to the underside of the machine foot or baseplate by means of a bolt, while the bottom plate should be secured to the floor by an expansion bolt. For certain applications a dowel pin may be adequate.

**Novibra® type U**

Type U provides for a stable machine installation and is particularly suitable for the vibration isolation of heavier machinery with relatively high interfering frequencies.

Typical applications can be found on:

- Presses
- Punches
- Weaving machines
- Woodworking machines
- Church bells
- Transformers
- Printing machinery
- Other heavy, high-speed machines
